First Part

Create A STLC for one of mobile applications (Trello,LinkedIN,Yalla Kora)

1- A list of ideas you would test for. Focus on good coverage, rather than complete test cases
2- Prioritization of such test cases according to their possible business impact

Bug report

- Write down six bugs you found
- Mention (Clear title- reproduce steps- needed attachments-severity and priority)

Second Part

Using selenium java please do the below task

1- Open eshop.vodafone.com.eg/shop/home
2- Select 3 items and add it to the cart (2 to be selected and 1 from the search bar)
3- Don't proceed with the order
4- Make sure you are using BDD and data-driven framework
5- Make sure to generate report using Extent report or Allure reports.
6- Use maven tool for ease of running

Third Part

Use any of these free APIS to create your tests https://apipheny.io/free-api/

1- List of test cases proposed for automation
2- Please automate proposed list of test cases (using rest-assured technique)

Please submit your results by sending us a link to your github Make sure that you separate folder containing Second and third part and another for the first part
